

## **Ironer Tape Welding Pliers Type MBZ 3**

## **+ Weldable Ironer Tape Type PXS**

The ironer tape welding pliers MBZ have been developed in order to connect the weldable ironer tape PXS knot-free within seconds while being mounted onto the ironer. This technique has the following advantages:

- knot-free connection, thus no marks from the knots on the laundry
- long durability, usually 3-4 times longer than the knoted ironer tape
- enormous cost reduction due to less down-times of the ironer
- easy handling

As to the welding process, lay the two ends of the ironing tape which are to be connected on top of each other so that they overlap 3-4 cm and then make two welding spots with a distance of about 1 cm.
